## 1 3/8" Insulated Steel Sandwich Doors

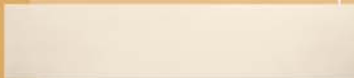

### 135

**Standard Classic Raised Panel**  
with woodgrain textured surface

### 136

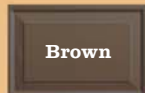

**Flush Design Panel**  
with woodgrain textured surface

Model 135 Standard Classic Raised Panel shown in Sandtone with optional Charcoal Flame Designer Classics Windows

- Steel sandwich construction (steel + insulation + steel) for excellent durability
- 1 3/8" polystyrene insulation for best energy efficiency, R-value 6.5
- Tongue-and-groove joints for superior weather sealing
- Prepainted steel for maintenance-free durability
- Six finish painted colors to complement your home
- A variety of windows to enhance your home
- Limited lifetime paint warranty for peace of mind

Models 135 and 136 feature 1 3/8" expanded polystyrene insulation bonded between two hot-dipped and galvanized steel skins for energy efficiency, durability, security, and quiet operation. Perfect for all climates, these doors keep your garage cooler in the summer and warmer in the winter. Featuring an attractive woodgrain textured surface, Models 135 (standard) and 136 (flush) add beauty and value to any home design.

Due to printing process, colors may vary. Please request an accurate color chip.

Model 136 Flush Design Panel shown in Almond

# Models 135, 136

## Features

- 1 Steel sandwich construction**  
1 3/8" thick polystyrene insulation is pressure-bonded between two sheets of steel providing exceptional strength, durability, maximum insulation value and quiet operation.
- 2 Virtually maintenance-free**  
Interior surface is finish painted white. Exterior panels are available in white, almond, brown, sandtone, gray, or hunter green, or can be painted to match your home.
- 3 Surface texture**  
Each exterior panel style features an attractive woodgrain texture. Inside steel skin has stucco texture.

### 4 Tongue-and-groove joints

Tongue-and-groove joints provide a superior weather-resistant seal at each section joint and help ensure best door alignment.

### 5 Bottom weatherseal system

Bottom vinyl weatherseal in rust-free aluminum retainer helps seal irregular floors against the elements.

## Paint System

Steel skins are protected from the environment through the use of a tough, layered coating system, starting with a layer of hot-dipped galvanizing and a protective metal oxide pretreatment, followed by a baked-on polyurethane primer and a tough, weather-resistant polyester top coat, creating a virtually maintenance-free surface.

## Patented Safe-T-Bracket®

Bottom bracket cannot, under normal circumstances, be removed while door is under tension.

## Galvanized Torsion Springs

Durable, corrosion-resistant galvanized torsion springs function for up to a 50% longer life and present a more attractive, polished appearance.

## Step Plate/Grip Handle

Color-matched exterior step plate/grip handles are durable, attractive, and allow for safe opening and closing of your door.
